-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The declaration of Hajime Ito, filed 11/16/06, has been considered and is deemed convincing. A new rejection follows:

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan patent publication 2001-072764 (JP-'764) in view of Japan patent publication 2001-354542 (JP-'542).

JP-'764 teaches cross-linked polyglutamic acid in cosmetics which has excellent stability (abstract). A particle size of 10 nm-500 um is specified (paragraph 18). 0.01-30% polymer is specified (paragraph 50). An oil vehicle is disclosed (paragraph 51).

JP-'542 teaches polyglutamic acid from *Bacillus subtilis* with molecular weights of millions or more (paragraph 10). Crosslinking with gamma irradiation is specified (paragraph 15).

It would have been obvious to make a composition comprising an oil and a cross-linked polyglutamic acid particulate to achieve the beneficial effect of stability in view of JP-'764. As to the claimed particle size range, a range encompassing that claimed is disclosed. An optimum suitable range may be obtained by routine experimentation, absent a showing of unexpected results. In re Boesch 205 USPQ 215 (CCPA 1980).

It would have further been obvious to one of ordinary skill in the art to use the polyglutamic acid of JP '542 in the composition of JP-'764 to obtain the beneficial effect of a

high molecular weight polymer. As to the claimed crosslinking by irradiation, JP '542 teaches such.

No claims allowed.
